XV Liceum Ogólnokształcące (15th Secondary School) / The Public Secondary School of the Lodz University of Technology

Located in central Poland, among rolling plains lies a city named Łódź. The name translates to boat which is quite ironic considering our lack of a larger body of water. The city boasts a wide array of eclectic and art nouveau-style buildings located mainly along our famous commercial strip (the longest in Europe!) - Piotrkowska Street. Łódź's past is strictly connected to the industrial revolution as it is when our textile industry flourished. After the industry collapsed, the city went through a difficult period of various changes. It slowly gained the identity of a university and cultural city based on an inspiring history of 4 cultures (Polish, Russian, German, and Jewish communities coexisting before World War II). Such history left us with many red-brick manufacturing establishments, now used as leisure centers like Manufaktura or Księży Młyn. This very city is where our schools are situated.

XV Liceum Ogólnokształcące (15th Secondary School)

The XV Secondary School in Lodz is a state school which provides comprehensive education for students aged 15-19 with the view of further university education. There are 35 teachers employed and 410 attending students from various family backgrounds, from urban and rural areas. All students learn English as the first foreign language. Other foreign languages are Italian, German, and Russian. We excel in humanistic subjects and languages. Our graduates perform well in national tests and are admitted to universities and technical universities.

Responding to the demands of the youth we undertake various projects to create positively challenging and motivating learning environment. We run the exchange programs within Erasmus+ program. We successfully realized multilateral projects on active citizenship, human rights, sustainability. We implement projects related to regional and global education. In 2018/2019, the youth of the 15th Secondary School took part in the Polish Humanitarian Action project. As a result of the actions taken, our school was awarded the title of "Humanitarian School".

The Public Secondary School of the Lodz University of Technology

The Public Secondary School of the Lodz University of Technology is a school founded by the Lodz University of Technology and is one of the leading high schools in the field of science (STEM) and foreign language education.

An important task of the school is to educate young people following universal ethical principles, in the spirit of responsibility, and respect for the Polish cultural heritage, while being open to the values of European and world culture. The school cooperates closely with the Lodz University of Technology. It offers classes or groups corresponding to polytechnic and medical studies, with the following extended subjects: mathematics, physics, computer science, chemistry, biology, and English. Practical exercises are carried out in university laboratories.
